

The Game Ranker

Gold Team

Eric Studley, Jake Dec, Tom Diaz

Revisiting the Value Proposition

- Game Ranker is a database of video games with **recommendations, reviews, average time played, and availability per console.**
- Game Ranker offers **recommendations of new games for players who want:**
 - Games of a specific genre
 - Games of over/under a specific time played
 - Games of particular quality or replay value.
- Game Ranker also allows developers to investigate if the length of a particular game or genre has an effect on game sales.

Data Set References

All datasets, queries, and code can also be obtained from the below GitHub Repository:
